Advanced Compiler Design Implementation

Advanced Compiler Design and Implementation presents a comprehensive and technically up-todate look at design of real-world

compilers for CISC- and RISC-based uniprocessor architectures. The author led the advanced compiler design and implementation teams for both Hewlett-Packard's PA-RISC and Sun Microsystems's SPARC processors.

Compilers implement these operations in phases that promote efficient design and correct transformations of source

input to target output. Program faults caused by incorrect compiler behavior can be very difficult to track down and work around; therefore, compiler implementers invest significant effort to ensure compiler correctness.
