What Is Archaeology? | Archaeology Definition | Live Science

Archaeology is the study of the human past using material remains. These remains can be any objects that people created, modified, or used. Portable remains are usually called artifacts. Artifacts include tools, clothing, and decorations.

archaeology | National Geographic Society

Archaeology helps us understand not only where and when people lived on the earth, but also how they have lived. Archaeologists examine change over time, seeking patterns and explanations. They ask questions about how and when humans first came to inhabit the Americas or the origins of agriculture and complex societies.

About Archaeology

Where To Download Archaeology What It Is Where It Is And How To Do It

What is Archaeology Archaeology is the study of the human past. Archaeologists use the material remains of human activities to reconstruct the behaviors and beliefs of prehistoric peoples. One of the most unique features of the science of archaeology is its ability to study human behavior over spans of hundreds or even thousands of years.

What is archaeology?

Archaeology too often operates in a kind of splendid academic isolation. There is a great need for archaeologists to do less telling and more asking and listening. We need to break down colonial-era hierarchies that distinguish “archaeologists” as authority figures and treat community contributors as peripheral.
