painful to humans and, from certain species, they can even be deadly. Although these magnificent marine creatures don't purposely attack humans, most stings occur when people accidentally touch a jellyfish. Picture credits Bioflourescent jellyfish: Getty Images UK. Jellyfish stings are relatively common problems for people swimming, wading or diving in seawaters. The long tentacles trailing from the jellyfish body can inject you with venom from thousands of microscopic barbed stingers. Jellyfish stings vary greatly in severity. Most often they result in immediate pain and

red, irritated marks on the skin.

## **Jellyfish stings - Symptoms and causes - Mayo Clinic**

Craspedacusta sowerbii or peach blossom jellyfish is a freshwater jellyfish in the phylum Cnidaria. Since it is classified as a hydrozoan, it is one of many jellyfish that are also known as hydromedusae.

# Access Free Jellyfish

Hydromedusan jellyfish differ from scyphozoan jellyfish because they have a muscular, shelf-like structure called a velum on the ventral surface, attached to the bell margin.

Jellyfish stings aren't like bee stings when it comes to the stinger. A bee sting leaves behind a single stinger that you can usually see and pull out. When

# Access Free Jellyfish

a jellyfish stings a person, it leaves thousands of very tiny stingers called nematocysts in the skin. These stingers can continue to release jellyfish venom (poison) into the person's body.
